

Subdivision Lesson Two: Sixteenth Notes

Jacobo Vega-Albela

This lesson covers a new subdivision: **sixteenth notes**. Many concepts from the previous lesson are transferrable here. Notice that **sixteenth notes** resemble eighth notes, but with the addition of an extra **flag** or **beam**. Remember, the **flag** or **beam** serves to make the notes **twice as fast** or **half the length** of the note it is added to.

This means **sixteenth notes** are **twice as fast** as eighth notes!

We also have a set of non-number **syllables** for counting sixteenth notes: “1” “e” “&” “a”. Four sixteenth notes fit into the time of one quarter note. This relationship is shown below:

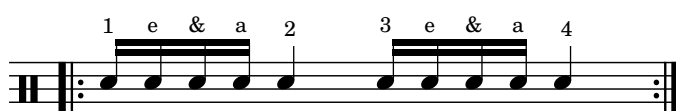

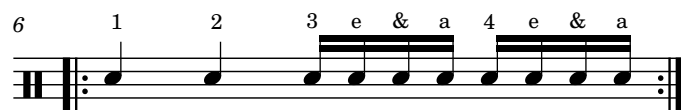

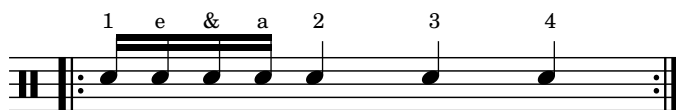

Practice the following exercises with the metronome at 60bpm, beat one accent turned on, and subdivision set to sixteenth notes. Try them with the metronome set to eighth note subdivision, and no subdivision as well. You can follow the link, or scan the QR below to find a metronome that is already configured to 60bpm with sixteenths turned on.
